Course Code: BUS104A
Course Name: Mathematics
Semester: Semester 1, 2015
Program: Certificate IV Tertiary Preparation Program
Credit Points: 10
Course Coordinator: Lars Tretow-Loof
Document modified: 11 Dec 2014 17:08:45

Teaching Team
Your lecturer/tutor can be contacted via the email system on the portal.

Staff Consultation
Your lecturer/tutor is available each week for consultation outside of normal class times. Times that your lecturer/tutor will be available for consultation will be given in the first week of lectures. A list of times and rooms will be published on the QIBT Portal under the “myTimetable” link.

Prerequisites
There are no prerequisites for this course

Brief Course Description
This course introduces students to some basic elements of mathematics that are encountered in business. Topics relate to the knowledge required for the application and solution of basic business related problems. Within this framework, students will learn basic mathematical techniques in algebra, geometry, optimisation, growth and decay, and finance. The course provides students with the fundamental skills necessary for further studies in areas such as commerce, information technology, engineering and science.

Rationale
As a graduate professional, students are likely to encounter a variety of situations in their occupation that require some basic mathematical knowledge and skill. If students are continuing studies or employment in the fields of engineering, science, commerce and information technology, mathematical skills are a basic requirement.

Aims
The aim of this course is to strengthen students understanding of, and skill in, basic mathematical procedures. The objectives include reinforcing their knowledge of fundamental algebra, graphical techniques and solution procedures, and enhancing their skills in solving problems of an applied nature.

Learning Outcomes
On successful completion of this course, you should be able to:
1. Perform basic arithmetic calculations.
2. Perform basic algebraic operations and calculations including factorising and simplifying algebraic expressions and solving equations.
3. Perform calculations involving functions and draw their graphs.
4. Solve problems involving sequences, series, and growth and decay.
5. Solve financial problems.
6. Perform basic differentiation and solve basic differential calculus problems.
7. Perform simple calculations involving set notation and techniques.

Texts and Supporting Materials
The resource used in BUS104 is a workbook prepared specifically for the course. The workbook covers the essential content for the course and should be sufficient material for you to successfully complete the course. If you require additional material to assist you in your studies you can refer to the list of other references provided below.

**Required Resources:**

- basic non-programmable scientific calculator.

**Other Resources:**

You may benefit from referring to and reading the following sources as required:

**Organisation and Teaching Strategies**

The course material may be covered through the use of lectures, texts, videos, practical exercises, self directed or peer assisted learning. Course delivery involves four (4) formal contact hours per week incorporating the presentation of theory with practical activities which are interspersed throughout classes. You are also provided with individual contact with your teacher through consultation times.

In class times you will be introduced to the essential areas of the course content. You will receive information about, and explanations of, the principal topics that are important to achieving the learning objectives of the course. This will give you the opportunity to gain knowledge of important course content. You will be encouraged to be an active listener and to interact with your teacher by asking questions and contributing your ideas.

Your understanding of course content will be enhanced through the completion of activities which assist you with your learning and provide an opportunity for you to raise any questions or concerns you may have with understanding course material. When needed, your teacher will inform you of any forward preparation or requirements that you are expected to undertake for upcoming classes. It is important that you complete such tasks so that the following classes can maximise the use of the available time to enhance your learning.

During class time you will also have the opportunity to develop a range of skills that will support learning objectives and foster certain generic skills that are helpful to your professional development.

The course utilises a range of web-based resources that you need to access. Although the course utilises a Workbook that contains all course content, lecture notes are also available on the QIBT portal for each week of semester. Links are provided to other resources that may help you in your learning activities. You should access the QIBT portal regularly to stay up to date with course information.

**Class Contact Summary**

**Attendance:**
Your attendance in class will be marked twice during a four hour class. To receive full attendance, you must be present in the classroom on both occasions. Therefore, you are encouraged to attend all classes throughout the semester.

**Actively Participate in Classes & Consultation Times:**
You will greatly advance your chances of success in the course by fully using the contact time you have available with your teacher. The contact time provided in classes and consultation is for your benefit; it is your opportunity to have any questions about course content or requirements clarified.

**Independent Learning:**
You are expected to reinforce your learning from class time by undertaking sufficient independent study. For this 10 CP course, you will need to spend at least 10 hours per week in an activity that will help your learning and fulfill the course objectives. Thus, provided you have well utilised the 4 hours per week of formal contact, you would then complete at least 6 hours per week of independent study.

**Program Progression:**
You are reminded that satisfactory Program Progression requires that attendance in classes is maintained at equal to or greater than 80%, and that GPA is maintained at equal to or greater than 3.5 [please see QIBT Policy Library - Program Progression Policy for more information].

**Content Schedule**

Classes are designed to progressively build your understanding of mathematical procedures. Early classes serve to establish the foundations; from them you will become familiar with fundamental principles and techniques. As you proceed through the semester, you should increasingly be able to apply foundation knowledge and develop your skills to solve more advanced problems.

**Weekly Teaching Schedule**

<table>
<thead>
<tr>
<th>Week</th>
<th>Topic</th>
<th>Activity</th>

Assessment Details

The **pop quizzes** (PQ1 - 5) are designed to assess your progress in understanding the fundamentals of mathematics and provide you with feedback on your capabilities. (Outcomes 1, 2, and 4). The pop quizzes will be consist of questions from the previous week, requiring only 5 minutes to complete.

The **two mini tests** (MT1 - 2) assess your foundation knowledge and skills in algebraic and graphical techniques and application. It also acts as a focal point for you to plan and monitor your learning progress. (Outcomes 1, 2, 3, 4, 5, 6, and 7)

The **assignments** (Assign 1 and 2) assess your ability to apply the material taught in class in a practical application. You will be expected to reflect and defend the approach taken and justify your outcomes. Both assignments are individual assignments.

The **end-of-semester final examination** (Final) assesses your knowledge and applied skills in all of the topic areas covered in this course, including algebra, simultaneous linear equations, optimisation, logarithms, finance and calculus. It provides you with a culmination point to encourage you to plan your effort and apply yourself consistently and requires you to review and apply material covered in the semester. (Outcomes 1, 2, 3, 4, 5, 6, and 7)

**Note:** Students who are continuing studies in Advanced Mathematics (MTH001) must achieve a Pass (P) grade or higher in order to satisfy the pre-requisite requirement.

Submission and Return of Assessment Items

Normally you will be able to access your results within fourteen [14] days of the due date for submission of the assignment. ALL assessment submitted in this course must be retained by QIBT as directed by the Australian Skills Quality Authority (ASQA) made under section 28 (1) of the National Vocational Education and Training Regulator Act 2011.

Retention of Originals

You must be able to produce a copy of all work submitted if so requested. Copies should be retained until after the release of final results for the course.

Extensions

To apply for an extension of time for an assessment item you must submit a written request to your lecturer via the Student Website at least 48 hours before the date the assessment item is due. Grounds for extensions are usually serious illness, accident, disability, bereavement or other compassionate circumstances and must be able to be substantiated with relevant documentation (e.g. medical certificate). Please refer to the QIBT website - Policy Library - for guidelines regarding extensions and deferred assessment.

Penalties for late submission without an approved extension

Penalties apply to assignments that are submitted after the due date without an approved extension. Assessment submitted after the due date will be penalised 10% of the TOTAL marks available for assessment (not the mark awarded) for each day the assessment is late. Assessment submitted more than five days late will be awarded a mark of zero (0). For example:

- > 5 minutes and <= 24 hours 10%
- > 24 hours and <= 48 hours 20%
- > 48 hours and <= 72 hours 30%
- > 72 hours and <= 96 hours 40%
- > 96 hours and <= 120 hours 50%
- > 120 hours 100%

**Note:**

- Two day weekends will count as one day in the calculation of a penalty for late submission.
- When a public holiday falls immediately before or after a weekend, the three days will count as one day in the calculation of a penalty for late submission.
- When two public holidays (e.g. Easter), fall immediately before or after, or one day either side of a weekend, the four days will count as two days in calculating the penalty for late submission.
- When a single public holiday falls mid-week, the day will not be counted towards the calculation of a penalty.

Please refer to the QIBT website - Policy Library - Assessment Policy for guidelines and penalties for late submission.

Assessment Feedback

Marks awarded for assessment items will also be available on the on-line grades system on the Student Website within fourteen [14] days of the due date.

Generic Skills
QIBT aims to develop graduates who have an open and critical approach to learning and a capacity for lifelong learning. Through engagement in their studies, students are provided with opportunities to begin the development of these and other generic skills.

Studies in this course will give you opportunities to begin to develop the following skills:

<table>
<thead>
<tr>

### Additional Course Generic Skills

**Additional Course Information**

Additional mathematical assistance, other than your normal scheduled classes, is usually provided for you should you feel in need of extra help. You will be provided with information about this service at the beginning of the semester.

In addition to formal contact hours, you are provided with extra support through individual consultation with teaching staff, tutorials in English language, and self-access computer laboratories.

**Teacher and Course Evaluations**

Most students say they are very satisfied with the course and the teaching. Students have also highlighted the value and importance of the course for their future studies.

Your feedback is respected and valued by your lecturers and tutors. You are encouraged to provide your thoughts on the course and teaching, both positive and critical, directly to your lecturer and tutor or by completing course and lecturer evaluations on the QIBT portal whenever these are available.

Students indicated that they are satisfied with the teaching in the course. Students also reported that they appreciate the quality of the teaching in the course as they need to be confident with maths concepts for their future studies.

### Academic Integrity

QIBT is committed to maintaining high academic standards to protect the value of its qualifications. Academic integrity means acting with the values of honesty, trust, fairness, respect and responsibility in learning, teaching and research. It is important for students, teachers, researchers and all staff to act in an honest way, be responsible for their actions, and show fairness in every part of their work. Academic integrity is important for an individual’s and the College’s reputation.

All staff and students of the College are responsible for academic integrity. As a student, you are expected to conduct your studies honestly, ethically and in accordance with accepted standards of academic conduct. Any form of academic conduct that is contrary to these standards is considered a breach of academic integrity and is unacceptable.

Some students deliberately breach academic integrity standards with intent to deceive. This conscious, pre-meditated form of cheating is considered to be one of the most serious forms of fraudulent academic behaviour, for which the College has zero tolerance and for which penalties, including exclusion from the College, will be applied.

However, QIBT also recognises many students breach academic integrity standards without intent to deceive. In these cases, students may be required to undertake additional educational activities to remediate their behaviour and may also be provided appropriate advice by academic staff.

As you undertake your studies at QIBT, your lecturers, tutors and academic advisors will provide you with guidance to understand and maintain academic integrity; however, it is also your responsibility to seek out guidance if and when you are unsure about appropriate academic conduct.

Please ensure that you are familiar with the QIBT Academic Integrity Policy; this policy provides an overview of some of the behaviours that are considered breaches of academic integrity, as well as the penalties and processes involved when a breach is identified.

For further information please refer to the Academic Integrity Policy on the QIBT website – Policy Library.

**Risk Assessment Statement**

There are no out of the ordinary risks associated with this course.
