

Course Code:	1018ENG
Course Name:	Engineering Science
Trimester:	Trimester 1, 2017
Program:	Diploma of Engineering
Credit Points:	10
Course Coordinator:	Dr Saeed Shaeri
Document modified:	13/06/2017

Teaching Team

Your lecturer/tutor can be contacted via the email system on the portal.

Staff Consultation

Your lecturer/tutor is available each week for consultation outside of normal class times. Times that your lecturer/tutor will be available for consultation will be given in the first week of lectures. A list of times and rooms will be published on the Griffith College Portal under the “myTimetable” link.

Prerequisites

This course does not have a pre-requisite. However, exposure to high school mathematics and physics can assist in better understanding the taught concepts. Nevertheless, all the basic and required principles of mathematics and physics will be covered during the course of trimester.

Brief Course Description

This experiential learning based course introduces the natural and physical sciences that underpin the practice of engineering. Through projects students will apply science fundamentals to the systematic investigation, interpretation, and analysis of some engineering problems. Topics covered include Newtonian mechanics and electrical principles.

Rationale

This course aims to expose students to the power of physics for the understanding and control of natural phenomena, both at an empirical, experimental level and also at a deductive, theoretical and mathematical level. It further aims to use these insights to provide practical tools for analysis of problems in applied disciplines such as engineering, aviation and the sciences for students from a variety of educational backgrounds.

Aims

This course aims to introduce fundamentals of Physics which are used in engineering studies. A variety of essential principles and rules, such as Newton's laws, Kinematics, Vector operations, Electricity and Electromagnetics, covering a wide range and varied spectrum of necessary knowledge of Physics, are taught and their application in to other branches of engineering are explained through hands-on activities and laboratory experimentation.

Learning Outcomes

After successfully completing this course you should be able to:

1. Describe important physical science concepts that underpin the engineering profession (for example, Newtonian mechanics, rigid-body mechanics, electricity and electromagnetics principles).
 2. Design and perform experiments and critically analyse the data received to support a theory or experimental objective.
 3. Apply mathematical techniques to the analysis of simple engineering systems.
 4. Work as an effective team member to develop simple engineering projects.
 5. Use oral and/or written communication skills to relay engineering science concepts.

Organisation and Teaching Strategies

Class Contact Summary

Lectures:

The basic concepts and analytic skills will be taught during 1 x 2 hrs per week lecture. Students are expected to attend the lectures and information may be given to students in lectures that will not necessarily be reproduced on the Griffith College Portal site for the course.

Tutorial Classes:

Students will be guided through key problems associated with the Lectures during 1 x 2 hr per week tutorial and problem solving class.

Workshop Classes:

Discussion of the issues and misconceptions associated with the week's material, demonstrations and simulations to solidify concepts will be presented through 1 x 2 hr per week workshop classes.

Lab Classes:

Students are required to attend and participate in two lab experiments (Mechanics and Electricity) which consist of 8 hours of both guided and experiential laboratory classes (4 × 2 hours in specified weeks during the trimester). Students have access to a lab task description sheet for each experiment and a lab demonstrator provides feedback on the approach that students take in each of the labs.

Each experiment has a pre-lab quiz valued 20% of the experiment mark. A 10% mark for full attendance and performance is given at the end of each laboratory session. The data collected in each lab session is analysed and reported through separate lab reports for each session (i.e. two reports for each experiment and four reports in total for the course). The mark for each report is 30% of the experiment mark.

These laboratory activities carry a total of 30% (1 × 10% and 1 × 20%) of the total marks for the course. Failure to attend and participate in all laboratory sessions may result in failing the course.

Attendance

Your attendance in class will be marked twice during every four hour class. To receive full attendance, you must be present in the classroom on both occasions. Therefore, you are encouraged to attend and participate in all classes throughout the trimester.

Preparation and Participation in Class

You are expected to read the relevant chapter/s and complete all work stated in the content schedule before the required class. This weekly preparation both in-class and independently will help in preparing you for each of the assessments. Peer study groups can be useful in assisting with your weekly preparation.

Consultation Times

Attendance during consultation times is optional and students are encouraged to use this extra help to enable them to meet the stated learning outcomes.

Course Materials

Lecture notes will be made available to students on the student portal and it is advised to print these out and bring them to each class so that extra notes can be added.

Independent Study

You are expected to reinforce your learning from class time by undertaking sufficient independent study (approximately 6 hours per week outside of class time) so that you can achieve the learning outcomes of the course.

Program Progression

Students are reminded that satisfactory Program Progression requires that attendance in classes is maintained at equal to or greater than 80%, and that GPA is maintained at equal to or greater than 3.5 (Australian students) or equal to or greater than 4.0 (International students) in any trimester. Please see Griffith College Policy Library – Program Progression Policy for more information.

Course Content Schedule

Week	Topic	Activity	Readings*
1	Part A) Introduction to the course, Part B) Units, Measurement and Uncertainties, and Part C) Vectors	Lecture / Tutorial	Ch. 1 and 3
	No session	Workshop	
2	Part A) One Dimensional Motion, and Part B) Forces and Motion I (Newton's Laws)	Lecture / Tutorial	Ch. 2 and 5
	Part A) Units, Measurement and Uncertainties, and Part B) Vectors	Workshop	
3	Part A) Forces and Motion II (Friction), Part B) Energy and Work, and Part C) Linear Momentum, Collision and Impulse	Lecture / Tutorial	Ch. 6, 7, 8 and 9
	Part A) One Dimensional Motion, and Part B) Forces and Motion I (Newton's Laws)	Workshop	
4	Part A) Uniform Circular Motion, and Part B) Rotational motion and Torque	Lecture / Tutorial	Ch. 10 and 11
	Part A) Forces and Motion II (Friction), Part B) Energy and Work, and Part C) Linear Momentum, Collision and Impulse	Workshop	
5	Review of Mechanics	Lecture / Tutorial	
	Part A) Uniform Circular Motion, and Part B) Rotational motion and Torque	Workshop	-
6	Part A) Coulomb's Law, and Part B) Electric Field and Potential	Lecture / Tutorial	Ch. 21, 22 and 24
	In-class quiz	Workshop	
	Experiment 1 – First Session	Laboratory	
7	Part A) Current and Part B) Resistance	Lecture / Tutorial	Ch. 26
	Part A) Coulomb's Law, and Part B) Electric Field and Potential	Workshop	
8	Part A) Capacitance and Part B) Circuits	Lecture / Tutorial	Ch. 25 and 27
	Part A) Current and Part B) Resistance	Workshop	
	Experiment 1 – Second Session	Laboratory	
9	Magnetic Fields	Lecture / Tutorial	Ch. 28 and 29
	Part A) Capacitance and Part B) Circuits	Workshop	
10	Principles of Fluid Mechanics-I	Lecture / Tutorial	Ch. 14
	Magnetic Fields	Workshop	
	Experiment 2 – First Session	Laboratory	
11	Principles of Fluid Mechanics-II	Lecture / Tutorial	Ch. 14
	Principles of Fluid Mechanics-I	Workshop	
12	Review of Electricity and Fluid Mechanics	Lecture / Tutorial	
	Principles of Fluid Mechanics-II	Workshop	
	Experiment 2 – Second Session	Laboratory	

*The chapter numbers refer to the course textbook.

Assessment

This section sets out the assessment requirements for this course.

Summary of Assessment

Item	Assessment Task	Weighting	Relevant Learning Outcomes	Due Date
1	On-line Quizzes (10 Wiley Plus quizzes)	20%	1, 3 and 5	From week 3 to week 12
2	In-class quiz	10%	1,3, and 5	Week 6
3	Laboratory Activities - Mechanics (Experiment 1, 2 sessions)	10%	1, 2, 3, 4 and 5	various weeks
4	Laboratory Activities – Electricity (Experiment 2, 2 sessions)	20%	1, 2, 3, 4 and 5	various weeks
5	Final exam	40%	1, 3 and 5	TBA

Assessment Details

On-line Quizzes

The On-line Quizzes will assess students' knowledge and understanding of the Physics science concepts covered in the course and the ability to apply that understanding to the solution of practical problems.

In class quiz

The in-class quiz is a closed-book test provides feedback to both the students and the teaching team regarding progress and conduct of the course. The in-class also tests encourages the students to keep up to date with their work.

Laboratory Activities

The laboratory activities assess the ability of the student to apply the taught principles to design, conduct, analyse and interpret actual experimental data. Also the laboratory activities will allow students to verify the fundamental laws of various systems and to compare the predicted response to the theoretically calculated behaviour of those system. Experiment 1 (Mechanics) deals with the concept of momentum, energy conservation and collision. Experiment 2 (Electricity) deals with the concept of resistors, currents and circuits.

Final exam

The final exam will be 180 minutes in duration, plus 10 minutes perusal, and will be closed book. The final exam will assess the student's knowledge and understanding of the topics covered in the course and the ability to apply that understanding to the solution of practical problems. The examination paper is devised also to test the students' computational skills, as well as the ability to apply that knowledge to engineering design problems. Marks will be awarded according to correctness of the procedure, accuracy of the solution and clarity of the presentation.

Requirements to pass the course:

Students are required to complete all items of assessment and achieve at least 40% in each of the above-mentioned assessment items. Students must also achieve an aggregate mark of at least 50% overall in order to achieve a grade of "Pass" or above.

Submission and Return of Assessment Items**Retention of Originals**

You must be able to produce a copy of all work submitted if so requested. Copies should be retained until after the release of final results for the course.

Extensions

To apply for an extension of time for an assessment item you must submit a written request to your lecturer via the Student Website at least 48 hours before the date the assessment item is due. Grounds for extensions are usually: serious illness, accident, disability, bereavement or other compassionate circumstances and must be able to be substantiated with relevant documentation (e.g. medical certificate). Please refer to the Griffith College - Policy Library for guidelines regarding extensions and deferred assessment.

Penalties for late submission without an approved extension

Penalties apply to assignments that are submitted after the due date without an approved extension. Assessment submitted after the due date will be penalised 10% of the TOTAL marks available for assessment (not the mark awarded) for each day the assessment is late. For example:

- > 5 minutes and <= 24 hours 10%
- > 24 hours and <= 48 hours 20%
- > 48 hours and <= 72 hours 30%
- > 72 hours and <= 96 hours 40%
- > 96 hours and <= 120 hours 50%
- > 120 hours 100%

Assessment submitted more than five days late will be awarded a mark of zero (0)

Note that:

- Two-day weekends will count as one day in the calculation of a penalty for late submission.
- When a public holiday falls immediately before or after a weekend, the three days will count as one day in the calculation of a penalty for late submission.
- When two public holidays (e.g. Easter), fall immediately before or after, or one day either side of a weekend, the four days will count as two days in the calculation of a penalty for late submission .
- When a single public holiday falls mid-week, the day will not be counted towards the calculation of a penalty.

Please refer to the Griffith College website - Policy Library > Assessment Policy for guidelines and penalties for late submission.

Assessment Feedback

Marks awarded for assessment items will also be available on the on-line grades system on the Student

Website within fourteen [14] days of the due date.

Generic Skills

Griffith College aims to develop graduates who have an open and critical approach to learning and a capacity for lifelong learning. Through engagement in their studies, students are provided with opportunities to begin the development of these and other generic skills.

Studies in this course will give you opportunities to begin to develop the following skills:

Generic Skills	Taught	Practised	Assessed
Written Communication	Yes	Yes	Yes
Oral Communication		Yes	Yes
Information Literacy	Yes	Yes	Yes
Secondary Research			
Critical and Innovative Thinking	Yes	Yes	Yes
Academic Integrity	Yes	Yes	Yes
Self-directed Learning		Yes	Yes
Team Work		Yes	Yes
Cultural Intelligence	Yes	Yes	Yes
English Language Proficiency		Yes	

Additional Course Information

Academic Integrity

Griffith College is committed to maintaining high academic standards to protect the value of its qualifications. Academic integrity means acting with the values of honesty, trust, fairness, respect and responsibility in learning, teaching and research. It is important for students, teachers, researchers and all staff to act in an honest way, be responsible for their actions, and show fairness in every part of their work. Academic integrity is important for an individual's and the College's reputation.

All staff and students of the College are responsible for academic integrity. As a student, you are expected to conduct your studies honestly, ethically and in accordance with accepted standards of academic conduct. Any form of academic conduct that is contrary to these standards is considered a breach of academic integrity and is unacceptable.

Some students deliberately breach academic integrity standards with intent to deceive. This conscious, pre-meditated form of cheating is considered to be one of the most serious forms of fraudulent academic behaviour, for which the College has zero tolerance and for which penalties, including exclusion from the College, will be applied.

However, Griffith College also recognises many students breach academic integrity standards without intent to deceive. In these cases, students may be required to undertake additional educational activities to remediate their behaviour and may also be provided appropriate advice by academic staff.

As you undertake your studies at Griffith College, your lecturers, tutors and academic advisors will provide you with guidance to understand and maintain academic integrity; however, it is also your responsibility to seek out guidance if and when you are unsure about appropriate academic conduct.

In the case of a breach of academic integrity made against a student he or she may request the guidance and support of a Griffith College Student Learning Advisor or Student Counsellor.

Please ensure that you are familiar with the [Griffith College Academic Integrity Policy](#); this policy provides an overview of some of the behaviours that are considered breaches of academic integrity, as well as the penalties and processes involved when a breach is identified.

For further information please refer to the Academic Integrity Policy on the Griffith College website – Policy Library.
